Have you ever wondered how and why highway alignments were selected in San Diego? We’ll discover how routes have evolved from the 1950s, when engineers drew a “pencil line” on a map, to the complex processes of today. We will discuss past routes where community and environmental concerns were not a high priority, including ones where neighborhood activists stopped projects that would have bisected their communities. Today, community feedback and environmental aspects play critical roles in project development. Please join us on this journey exploring how our communities were built around and often through the network of routes that we use today. Students will compare and contrast how highways have affected communities in San Diego. They will learn how a highway can affect a community both positively and negatively. We will discuss why some communities seem to have more than their share of highways. They will learn the different environmental aspects that shape the routes. Students will learn the method used for route selection in the past and learn about the current method of project development that creates better neighborhoods where transportation and communities co-exist. Lastly, students will be asked if highways affected their choice of the community where they live.

And we will concentrate on women who were considered important: Karen Horney, Melanie Klein, Anna Freud, Ana Maria Rizzuto and others. The goal of this series is to bring out the indisputable contributions of these four women to psychoanalysis and the practice of psychotherapy.
